AUTUMN’S LEARNINGS

The November webinar of the WinS Network will focus on recent studies, evaluations, and tools to strengthen and sustain the WinS (Water, Sanitation, and Hygiene in Schools) systems.

The session will begin with Christine JiaRui Pu, a PhD candidate from Stanford University, presenting a systematic review of the necessary conditions for sustainable water and sanitation service delivery in schools. This will be followed by Brooke Yamakoshi, a WASH specialist from UNICEF EAPRO, who will present the enabling environment framework. This tool has been effectively used by Ministries of Education, government departments responsible for WASH, and development partners to discuss their WinS status. Lucie Lecerf of Swiss Water and Sanitation Consortium (SWSC) Partners will then present the evaluation methodology of their signature approach, Blue Schools, which uses the enabling environment tool in the conceptual framework.
